

The Little River Boat™

Better than...

a conventional **Pontoon Boat** because:

* It's **Light** and **Easy** to handle!

No other Pontoon boat is as easy to trailer as The Little River Boat™.

Just about any small boat, utility or snowmobile trailer can be quickly converted to transport it.

In fact, it's so light and easy to handle that one person can load or unload The Little River Boat™ from its trailer without a winch!

You won't see that in any other Pontoon Boat!

Better than...

a conventional **Row Boat** because:

* It's got Fantastic **Stability!**

You can feel free to move around on the deck when Fishing, Hunting or Swimming — because...

The Little River Boat™ doesn't feel tippy --- no matter where you are on the deck.

You'll know what we mean the first time you take it out on the water!

Versatility...

While we keep it simple - The Little River Boat™ is an ingenious design. It is one of a kind and offers real advantages. We handcraft each one individually, using high standards of quality. Because of it's unique, flat bottom, foam filled design -- it weighs a lot less than a comparably sized, traditional pontoon boat. It also costs a lot less.

The Little River Boat™ is 12 feet long, 6 feet wide and only weighs about 260 lbs. On top of being light weight, easy to handle and inexpensive – it's also very stable, comfortable and great fun. All wrapped up in a small boat with plenty of room for 4 people and an 800 LB weight capacity.

Ideal for lakes, rivers, streams and ponds using either electric or gas motors...

--(you can even row it)--

The Little River Boat™ is the most versatile small pontoon boat on the planet.

The Secret...

These “new concept” pontoons represent a whole new concept in pontoon design, created by AquaCraft. They are made of a solid Polystyrene core encased in corrosion resistant Marine Aluminum.

Our “new concept” pontoons are combined with light weight, quality materials like...

- *1/2 inch - 5 ply - Marine Treated Plywood Deck
- *Secured with “Space age” structural adhesive sealant and stainless steel screws.
- *Overlaid with high quality marine carpet.
- *and handsomely anodized aluminum rails.
